Experience

ZS Associates

Software Engineer

Pune, India

Jul 2024 to Feb 2026

Project: Enterprise Contract Decision Support Platform (Client: Pfizer, Merck)

- Reduced API latency **60%** (500ms to 200ms) under production load by re-architecting synchronous flows into asynchronous processing with a Redis caching layer.
- Cut manual processing time **30%** by designing and shipping REST APIs and backend services in Node.js and Express.js that automated contract-decision workflows across Pfizer and Merck engagements spanning **\$29M+** in contract value.
- Hardened multi-tenant APIs with JWT authentication, role-based access control (RBAC), and request rate limiting, isolating sensitive data and shielding services from abuse across every client environment.
- Modeled relational schemas and wrote SQL stored procedures on MySQL (Amazon RDS), applying design patterns to keep business logic consistent across deployments.
- Standardized feature delivery across the team by building a library of reusable service modules and React components, cutting duplicated code and speeding up new work.

Tech: Node.js, Express.js, REST APIs, MySQL (Amazon RDS), Redis, JWT/RBAC, AWS, Git

Project: Data Ingestion and Reconciliation Backend (Client: Sanofi)

- Designed and operated backend data pipelines that ingested and reconciled data across 4 source systems into a Snowflake data warehouse, processing ~4 GB/day on a daily refresh.
- Owned reliability across 6 pipelines and ~16 tables, monitoring jobs and resolving anomalies to drive production failure rates down **15 to 20%**.
- Built automated data-validation and sanity checks that enforced business rules and data consistency before load, cutting manual effort **35%** and supporting decisions worth ~**\$4.3M** in project revenue.

Tech: Snowflake, SQL, IICS / Informatica (built-in scheduler)

Nirvana Studio

Software Engineer Intern (during B.Tech)

New Delhi, India

Jan 2023 to Jun 2023

- Shipped 10+ React and Redux UI features for a web app serving **10K+** users.
- Introduced Jest tests and clean-code standards that reduced rework during code reviews.

Projects

SinkedIn | Full-Stack Community + Job-Tracker Platform (Next.js, Node, Prisma, PostgreSQL)

[Live](#) · [Code](#)

- Built and deployed a full-stack TypeScript product **live with real users**, with a strict layered Express API (routes → controllers → services → Prisma), Zod validation on every request, and per-route rate limiting.
- Implemented Supabase Auth with local JWT verification, row-level-secured private resume storage via signed URLs, soft-deletes throughout, and CI/CD (GitHub Actions, Vitest) deploying to Vercel and Render.

JobMaxxing AI | AI Career Platform (Node.js, Express, React)

[Live](#) · [Code](#)

- Built a Node.js / Express REST API backend integrating LLM / AI APIs to power an automated resume parser and GitHub profile analyzer, with Supabase OAuth and a React frontend.

Technical Skills

Backend: Node.js, Express.js, REST APIs, API Design, Asynchronous Processing, Caching (Redis), Rate Limiting, JWT & RBAC Auth, Stored Procedures, System Design

Languages: JavaScript (ES6+), TypeScript, Python, SQL

Databases: PostgreSQL, MySQL, MongoDB, Prisma (ORM)

Cloud & Tools: AWS (EC2, S3, RDS), Docker, CI/CD, Git, GitHub, Jest, Monitoring & Observability

Frontend: React.js, Next.js, Redux, HTML5, CSS3

AI / LLM: LLM / AI API Integration, Prompt Engineering, AI-Powered Features

Education

Maharaja Agrasen Institute of Technology

Bachelor of Technology in Information Technology | **CGPA: 8.8 / 10**

New Delhi, India

Jul 2020 to Aug 2024

Leadership & Extracurricular

- Team Lead, **Smart India Hackathon**, Top 10 among 200+ participating teams.
- Mentored a software engineering intern on architecture and best practices, contributing to their conversion to a full-time role.
